

# Crop Report

6-Nov-2025

Andrew H Ware: Lock

Crop: Wheat  
Cultivar: Calibre  
Sowing details: 150 plants/m<sup>2</sup> on 10-Jun  
Expected maturity date: 30-Nov

Paddock Details  
Initial conditions date: 1-Apr  
Soil: Grey Calcareous Loamy Sand (Lock No318)  
800 mm max rooting depth  
Stubble: 1000 kg/ha of Canola  
No till

## Grain Yield Outcome

This graph shows the probability of exceeding a range of yield outcomes this season. It takes into account your pre-season soil moisture, the weather conditions so far, soil N and agronomic inputs. The long term record from your nominated weather station is then used to simulate what would have happened from this date on in each year of the climate record. The yield results are used to produce this graph.

## Hay Yield Outcome

This graph shows the probability of exceeding a range of hay yield outcomes this season. It takes into account the same factors as the grain yield graph above. When above ground dry matter is below 2t/ha, hay yield is assumed to be 70% of dry matter, with a moisture content of 13%. When dry matter is between 2 and 12t/ha, hay yield is assumed to be between 70 and 75% of dry matter (sliding scale). When dry matter is above 12t/ha, hay yield is assumed to be between 75 and 80% (sliding scale).

Current dry matter: 6058.174929007966kg/ha

## The Season So Far - Growing Season Rainfall Deciles

Simulated and Predicted Crop Growth Stage

Probability and Incidence of Frost and Heat Shock

Frost damage during flowering				Heat damage during grain fill			
Probability		This Season		Probability		This Season	
mild			0%	0	mild	100%	1
2 to 0°C during flowering					32 to 34°C		
moderate			0%	0	moderate	100%	1
0 to -2°C during flowering & early grain fill					34 to 36°C		
severe		0%	0		severe	0%	0
Less than -2°C during flowering & grain fill					Above 36°C		

Current Distribution of PAW

Water Budget

Initial PAW status @ 1-Apr	33 mm
Rainfall since 1-Apr	319.8 mm
Irrigations	
Evaporation since 1-Apr	156 mm
Transpiration since 1-Apr	184 mm
Deep drainage since 1-Apr	22 mm
Run-off since 1-Apr	6 mm
<b>Current PAW status:</b>	<b>34 mm</b>

Probability of Future Waterlogging Events

Nitrogen Budget

Initial N status @ 1-Apr	87 kg/ha
N mineralisation since 1-Apr	81 kg/ha
N tie up since 1-Apr	0 kg/ha
N applications	
1-May : 14 kg/ha	
1-Jul : 36.8 kg/ha	
Total N in plant	91 kg/ha
De-nitrification since 1-Apr	0 kg/ha
Leaching since 1-Apr	7 kg/ha
<b>Current N status:</b>	<b>45 kg/ha</b>
Median N mineralisation to maturity = 62.301583610723 kg/ha	
Median N tie up to maturity = 0 kg/ha	

Current distribution of soil nitrogen (kg/ha)

Availability of Water to Growing Roots

Availability of Soil Nitrogen to Growing Roots

Water Stress

Nitrogen Stress

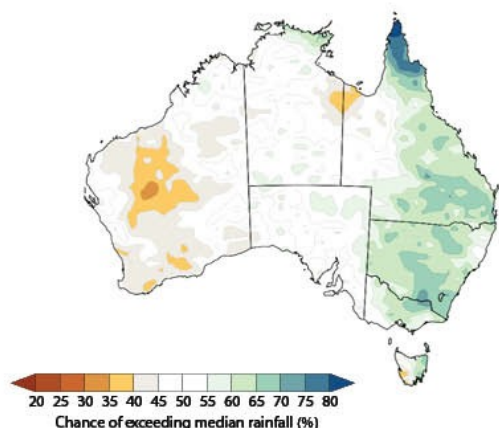

Brief periods of mild to moderate stress do not necessarily lead to reduced yield. To see the likely impacts of additional nitrogen fertiliser rates use the Nitrogen and Nitrogen Profit reports.

Median projected crop performance and requirements for the next 10 days assuming no rain and no added fertiliser

Date	Growth Stage	Evap. (mm)	Water use (mm)	N use (kg/ha)	Water avail. to roots above stress threshold (mm)	Water avail. to roots above CLL (mm)	N avail. to roots (kg/ha)	Mineralisation (kg/ha)	N tie up (kg/ha)
7-Nov	85.5	2.7	0.0	0.0	5.3	31.5	16.8	0.4	0.0
8-Nov	86.0	2.5	0.1	0.0	2.6	28.8	16.9	0.4	0.0
9-Nov	86.5	1.4	0.1	0.0	1.2	27.4	17.1	0.4	0.0
10-Nov	87.0	1.1	0.1	0.0	0.1	26.3	17.3	0.4	0.0
11-Nov	88.3	0.9	0.1	0.0	-0.9	25.3	17.4	0.4	0.0
12-Nov	89.7	0.8	0.1	0.0	-1.7	24.5	17.6	0.4	0.0
13-Nov	90.0	0.7	0.1	0.0	-2.4	23.8	17.8	0.4	0.0
14-Nov	90.0	0.7	0.0	0.0	-3.1	23.1	17.9	0.4	0.0
15-Nov	90.0	0.6	0.1	0.0	-3.7	22.5	18.1	0.4	0.0
16-Nov	90.0	0.6	0.1	0.0	-4.3	21.9	18.3	0.4	0.0

The water available to roots above the stress threshold is the amount of PAW (mm) above one third of the total water holding capacity of this soil. If the water values are below this stress threshold the water available to roots above the stress threshold will be negative.
